# Analysis of market_value of EPL soccer players (Season 2021/20)

So this is the dataset of market value prediction for soccer players from season 2021/20. The graph below was for generating predictions on training data using jointplot.

This was the pairplot of all the features vs. market_value(predictor).

Things that I still need to work on:
1. Combining the 2019/20 data with the 2020/21 data.(I recently found out that the 2019/20 data that I'm trying to add had an issue, so I am working on this currently).
2. More feature engineering + modeling to see the best fit of the model to predict the market value of players.
